# FUJI

Intelligence

FUJI Intelligence Elevator Co., Ltd is a company that specialized in high-tech elevators, escalators and passenger conveyor industry. Factory now covers an area of nearly 20000 m' production base in Suzhou city, Jiangsu Province. There are about 200 employees currently, among which 35% are professional technicians forming a professional management and technical team.

Over the years, FUJI Intelligence insists on the market-oriented and customer-focused idea to establish and develop the "Trine Marketing System" integrating sale, installation and maintenance. Meanwhile, Fuji Intelligence has been focusing on technological innovation and development so that its elevator technology takes the lead in the global market.

As a professional elevator supplier, FUJI Intelligence always absorbs and learns world advanced concepts and management systems in order to keep its corporate management in the same pace with international trend. FUJI Intelligence has passed ISO9001 quality management system, ISO14001 environmental management system and GB/T28001 occupational health system certification, and further promoted the establishment and application of corporate information system to support its business and operation with advanced technologies and scientific management ideas

FUJI Intelligence serial escalator and conveyor use the humane design ideas. It integrates aesthetics, safety and environmental protection into one. It provides vast customers with the dignified outline, the reliable quality, the outstanding performance.

- The truss adopts the robotic welding technology, which greatly enhance the manufacturing process. It has lean quality and it is sturdy and durable, beautiful and elegant.
- The integral aluminum frontier plate is tough and rugged, stylish and light weighted, and easy for maintenance.
- The diameter of the contact roller is  $\phi 70$ . This can effectively reduce the roller pressure, and improve the step chain breaking force.
- Jinshou B-type escalator adopts the stylish and beautiful stainless handrail bracket suitable for large lifting height.
- Outside of skirting panel, there is a transparent friction-reducing coating, effectively reducing the friction loss between the steps and skirting panel.
- The wedge has a spring structure and glass bracket. By tightening the spring, users can ensure that the wedge and glass is closely laminated, which is sturdy and steady and easy to be installed.

The diameter of the contact roller increases → Reduce roller pressure → Step chain breaking force increase greatly → Safety factor improves

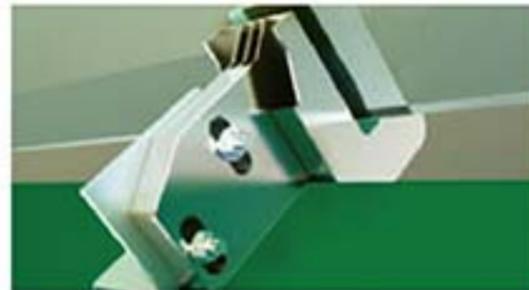

### Integrated Design

The integrated design of upper and lower drive and step track can avoid the step moving to ensure a smooth transition to the curve track and drive, and reduce the vibration when the step running.

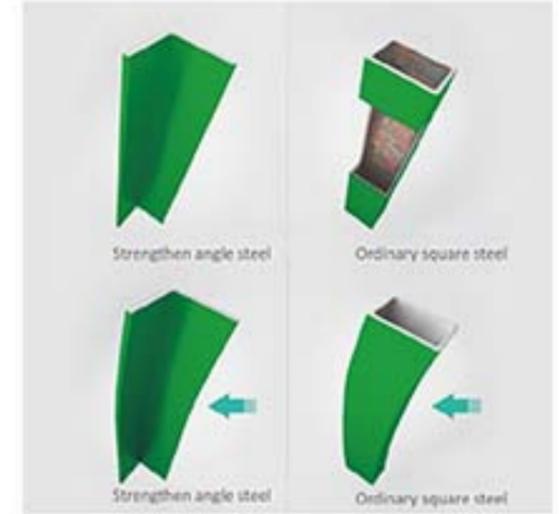

Wear-resisting Painted Skirt Panel (Optional)

Wedge with Spring Structure and Glass Bracket (Optional)

### Full Angle Steel Section Bar Truss

The use of angle steel for the whole truss brings better performance in antirust and usability under all tough conditions. The deflection of strengthen angle steel truss is less than ordinary square steel truss under the same cross-section case, and the strengthen angle steel truss is not easily deformed.

Robotic Welding

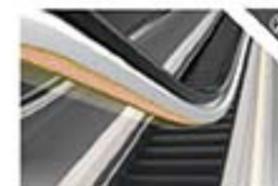

Stainless Steel Handrail Bracket

### Handrail Lighting

White(Optional)

Yellow(Optional)

### Running Direction Indicator

Transparent plastic LED display (Optional)

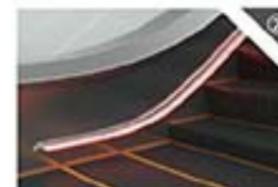

Black plastic dot matrix display (Optional)

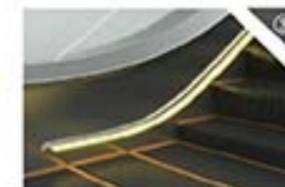

### Skirt Lighting

White(Optional)

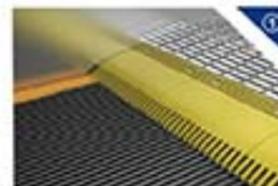

Red(Optional)

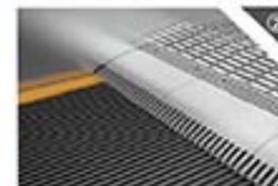

Yellow(Optional)

### Combs

Yellow polyester(Standard)

Aluminum(Optional)

### Inner and Outer Decking

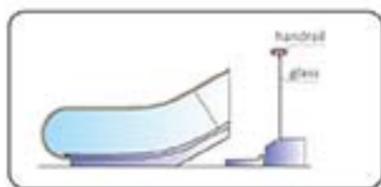

Hairline stainless steel(Standard)

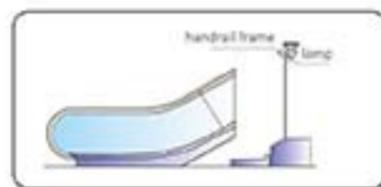

Aluminum alloy(Optional)

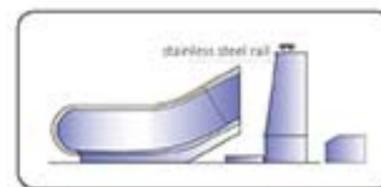

### Balustrade Design

Type-I(Slim)

Type-P(Normal),w Lighting(Inclined)

Type-T(Inclined)

### Step

Black stainless steel with yellow alert(Standard Room)

Aluminum with Security Cord (Optional)

### Pallet

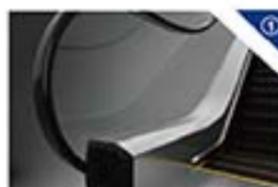

Aluminum alloy with the yellow line(Standard)

Black stainless steel with yellow warning line(Optional)

### Handrail Color

Black(Standard)

Gray(Optional)

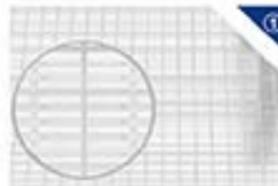

Red(Optional)

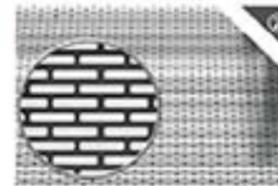

Yellow(Optional)

### Front Panel

Square groove black painting (Standard)

Black coating in the slot of the box (Optional)

Striped groove black paint (Optional)

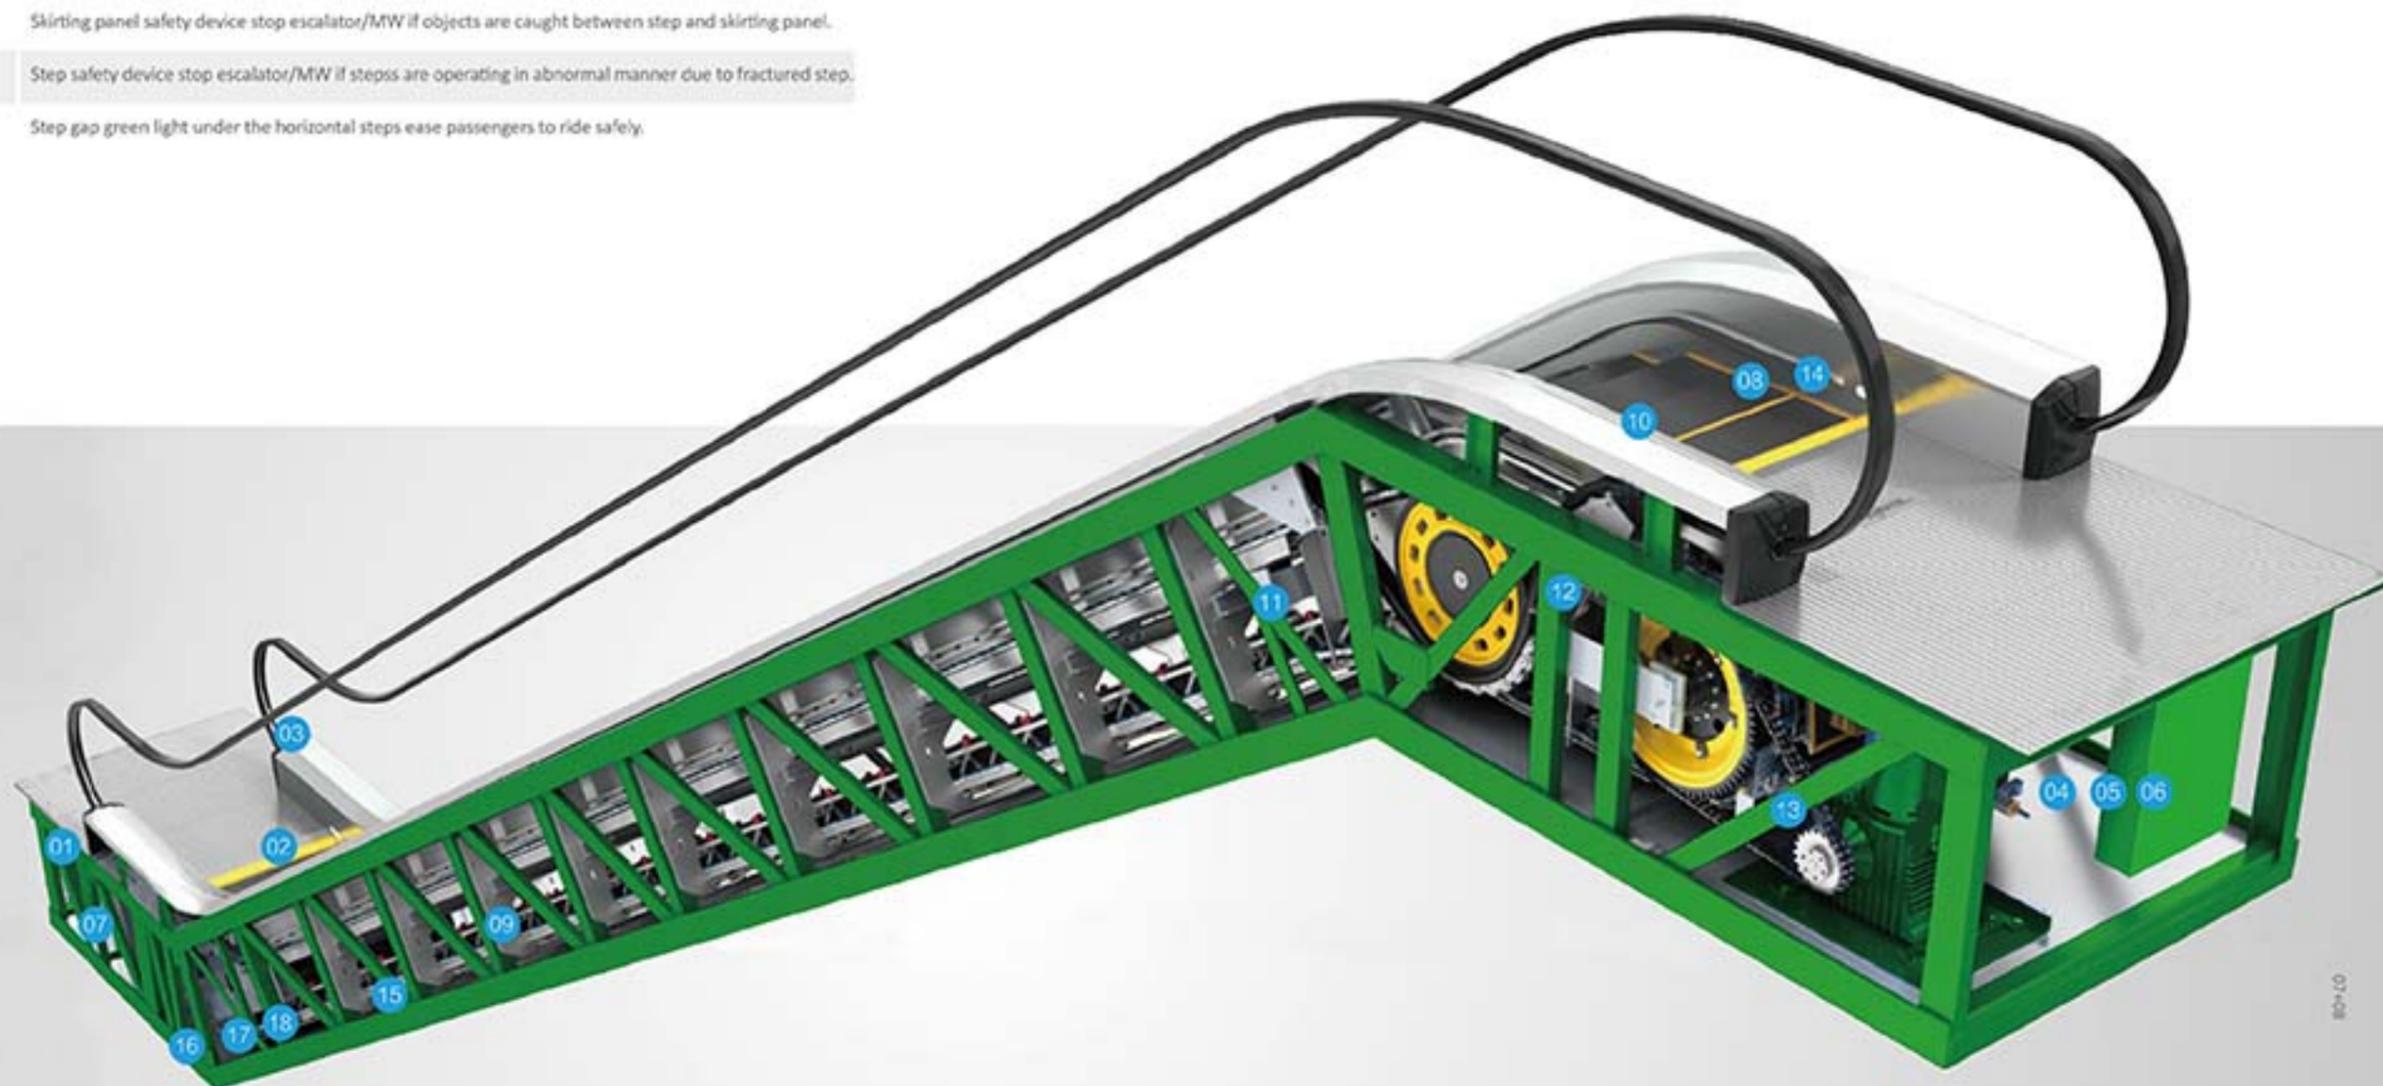

Note: Pictures might be slightly different from actual colors. Please take real product as criterion.

## Multiple Safety Protection Function

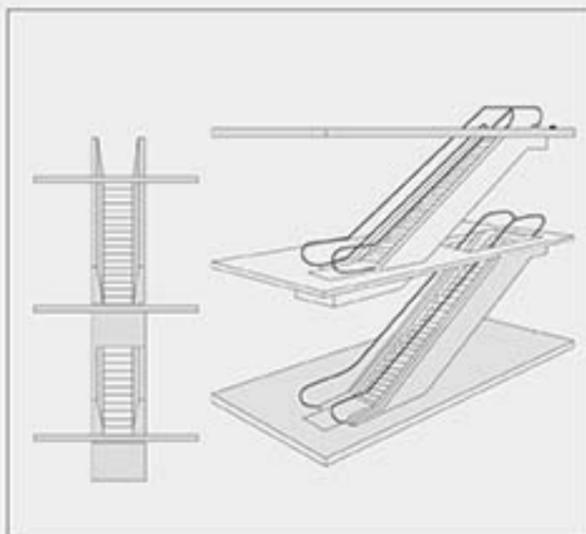

Function name	Function description
01 Emergency stop button	Emergency stop device in an emergency, stop escalator/MW immediately if pressed.
02 Comb plate safety device	Comb plate safety device stop escalator/MW if objects are caught between comb plate and step treads.
03 Handrail entry safety device	Handrail entry safety device stop escalator/MW if hand or object is pulled into the handrail entry.
04 Phase(fault phase) protection	Phase monitoring device stop escalator/MW if missing phase or wrong phase occurs.
05 Over speed protection device	Over-speed detector stop escalator/MW if operating above normal speed.
06 Non operation reversal protection device	Non-reversing safety device stop escalator/MW if its direction of operation is reversed.
07 Cascade chain protection device	Step chain safety stop escalator/MW if the step chain breaks or becomes loose.
08 Apron protection device	Skirting panel safety device stop escalator/MW if objects are caught between step and skirting panel.
09 Cascade collapse protection device	Step safety device stop escalator/MW if steps are operating in abnormal manner due to fractured step.
10 Step gap lighting	Step gap green light under the horizontal steps ease passengers to ride safely.

Function name	Function description
11 Additional brake device	Auxiliary brake stop escalator/MW if the driving chain breaks or over-speeds.
12 Safety device of brake shoe wear	Brake lining wear safety device stop escalator/MW if the lining of main brake is worn abnormally.
13 Drive chain protection device	Drive chain protection device stop escalator/MW if the driving chain breaks or excessively loosen.
14 Comb plate lighting	Comb plate light on both side of comb plate ease passengers to ride safely.
15 Arm speed detection device	Handrail speed detector stop escalator/MW if handrail is below normal speed due to handrail breakage or elongation.
16 Handrail broken device	Handrail broken safety device stop escalator if handrail breaks or stops.

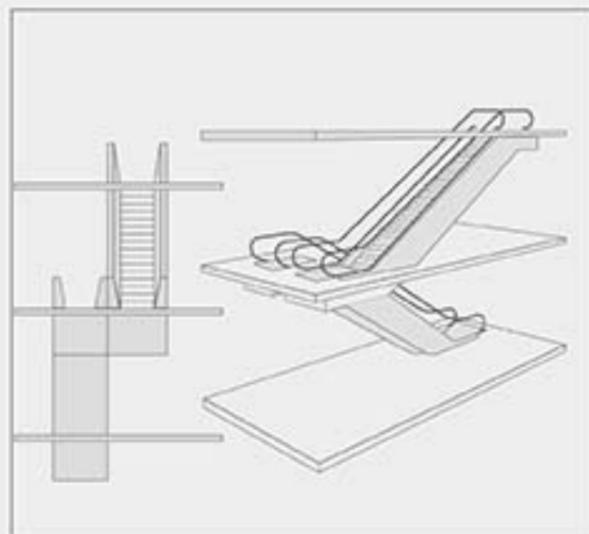

## Diverse products, reasonable layout and scientific planning

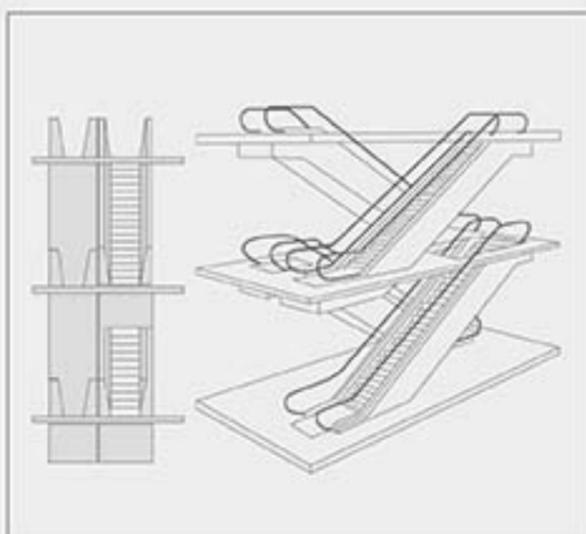

**Interrupted arrangement (one travel direction)**

This arrangement the number of passengers will cause inconvenience, but the mall owners, because the transfer to the space between the escalator up or down the escalator and intermittent possible for customers to see the exhibits of specially arranged.

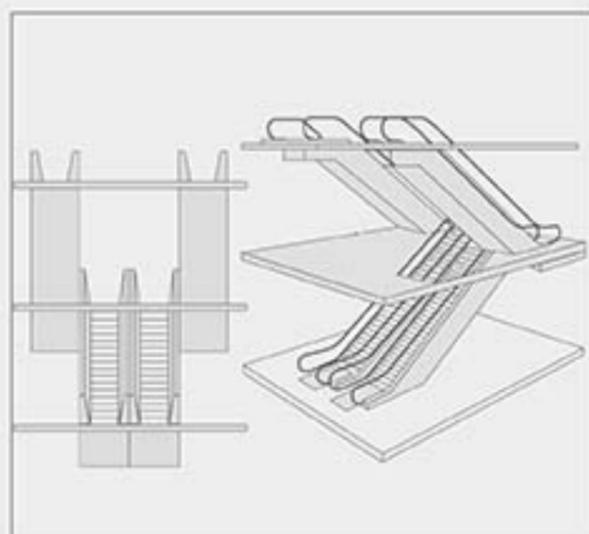

**Multi-level criss-cross arrangement (continuous traffic flow, two travel directions)**

This arrangement is mainly used for small department stores, three consecutive sales floor. This arrangement than intermittent arranged need more space.

**Continuous arrangement (one travel direction)**

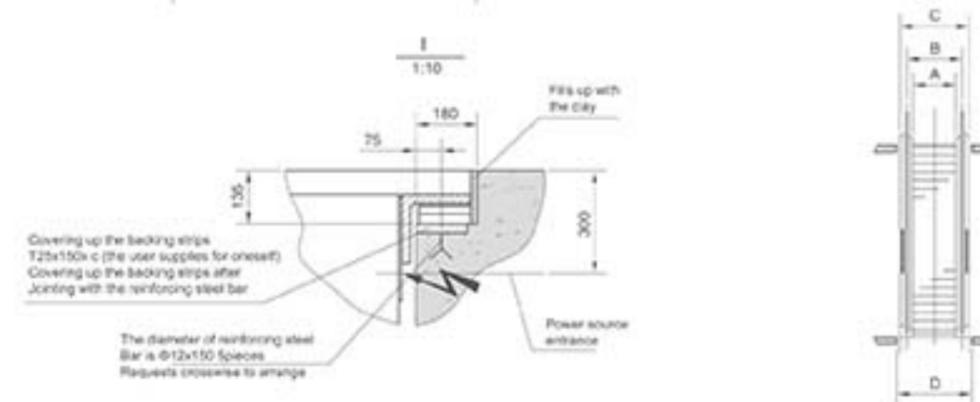

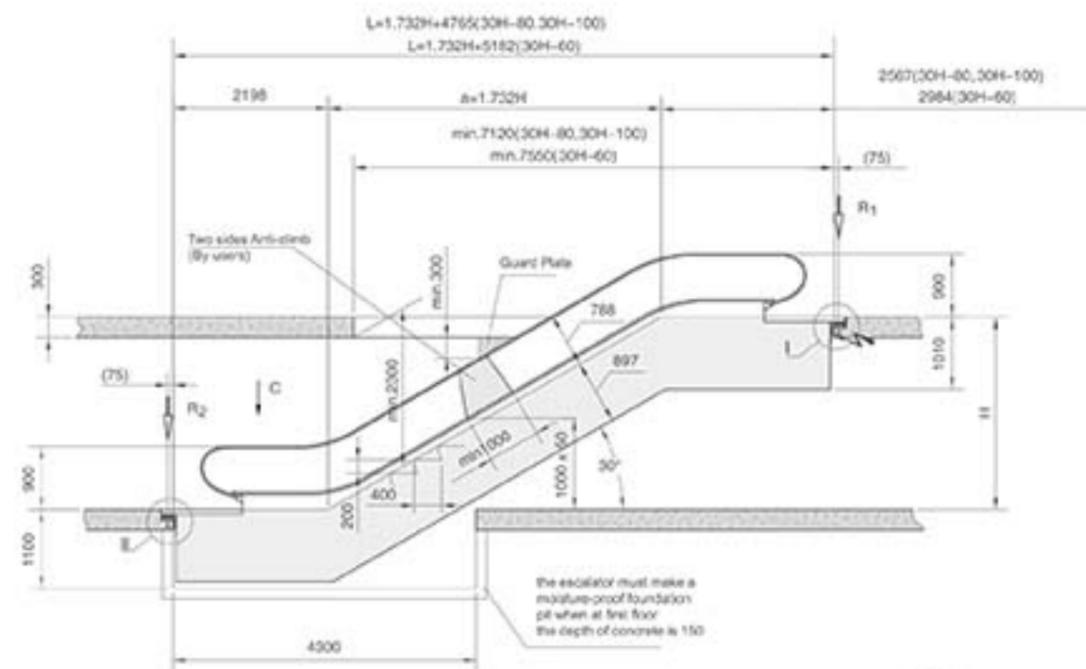

This arrangement is mainly used in large department stores, public buildings and places of public transport, the number of transport between the floors of these places should be kept as small as possible.

**Parallel arrangement (continuous traffic flow, two travel directions)**

This arrangement is mainly used for large traffic shopping malls and public transport facilities. When three or more escalators, it should be possible to change the direction of movement in accordance with the traffic. This arrangement is more economical, because without the inner baffle.

## CF30H Escalator Series

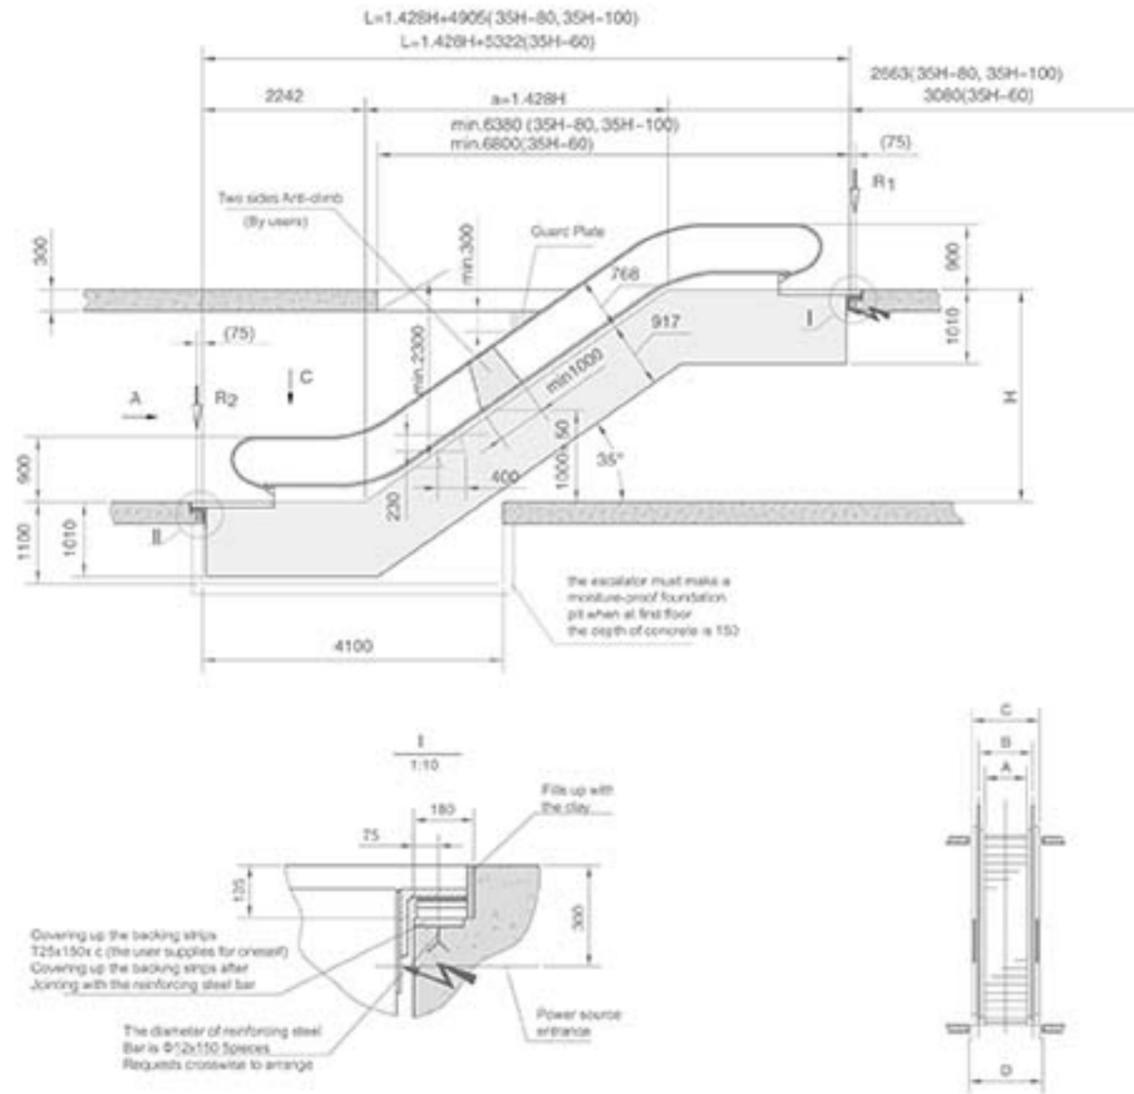

Technical Speed (mm)	Self-weight (KN)	Support counterforce (KN)		Technical Speed (mm)	Self-weight (KN)	Support counterforce (KN)		Size code	BCF 30H-60	BCF 30H-80	BCF 30H-100
